Of companies are expanding adoption of external services

30%

Spent by leading IT managers on strategic initiatives

Supplement Core Competencies with External Capabilities

Continuous advances in IT are rapidly changing the way companies do business. Changes in user requirements, challenges with managing both legacy and new technology, and shifts in managing IT expenses are shaping corporate IT landscapes. Today, it is imperative for IT leadership to maintain productivity, ensure user satisfaction, and deliver profitable results.

More and more, enterprises are turning to external IT services—like professional services, staff augmentation, field services, and managed services—to help implement complex technologies, and maximise IT spends

“The **BLACK BOX** team is an integral part of the day-to-day operations at MIA. They understand what we need to run smoothly and our two teams work seamlessly as one.”

Maurice Jenkins

Information Systems & Telecommunications Division
Miami-Dade Aviation Department

Cost Control

The strategic use of IT Services makes sense for companies driven to improve cost efficiency and maximise their IT spend. IT Services provide companies with the flexibility to determine the best use of their IT budget—designing their own consumption models and bundling services as needed to minimise investment risk.

IT Services also help to adjust and balance CAPEX and OPEX expenditures to align with cash flow and finance objectives. Outsourcing daily tactics can actually enhance cost-control initiatives that measure business outcomes versus IT spend.

Day-to-Day Management

Many organisations struggle to achieve strategic IT objectives due to the day-to-day tasks associated with operating a fully-functional, comprehensive, and reliable enterprise network. Limited time and expertise stretch existing resources, shifting focus from executing a broader IT vision to managing daily activities that support existing solutions. IT Services can augment and simplify everyday IT operations, both remotely and onsite, to refocus time and energy on strategic IT initiatives.

Strategic Technology Adoption

Many IT departments find it challenging to stay current and proficient with the rapid evolution of new IT business technologies and applications. Supporting complex, enterprise-critical technology requires a depth of expertise and knowledge not always available internally. Qualified resources are critical to meeting these needs, and tapping into both resources and solutions can enable a new IT direction.

Expertise, Efficiency, and Transparency

Black Box understands the resource, strategic, and cost issues involved in supporting and maintaining an effective IT system. Our depth of IT knowledge, proven efficiency, and on-the-job transparency—combined with our unparalleled customer-focused approach—ensure that your objectives are always met.

Black Box IT Services are based on a software-defined process that aligns with ITIL best practices to deliver a broad range of capabilities that include Wired and Wireless Infrastructure and IT management. We incorporate IT disciplines and operational effectiveness for on-time delivery, and offer proven visibility with service-level objectives that makes integrating with your IT organisation seamless.

These defining qualities differentiate Black Box from other providers, and help us to align and integrate with your IT organisation easily and effectively.

Our Services Framework:

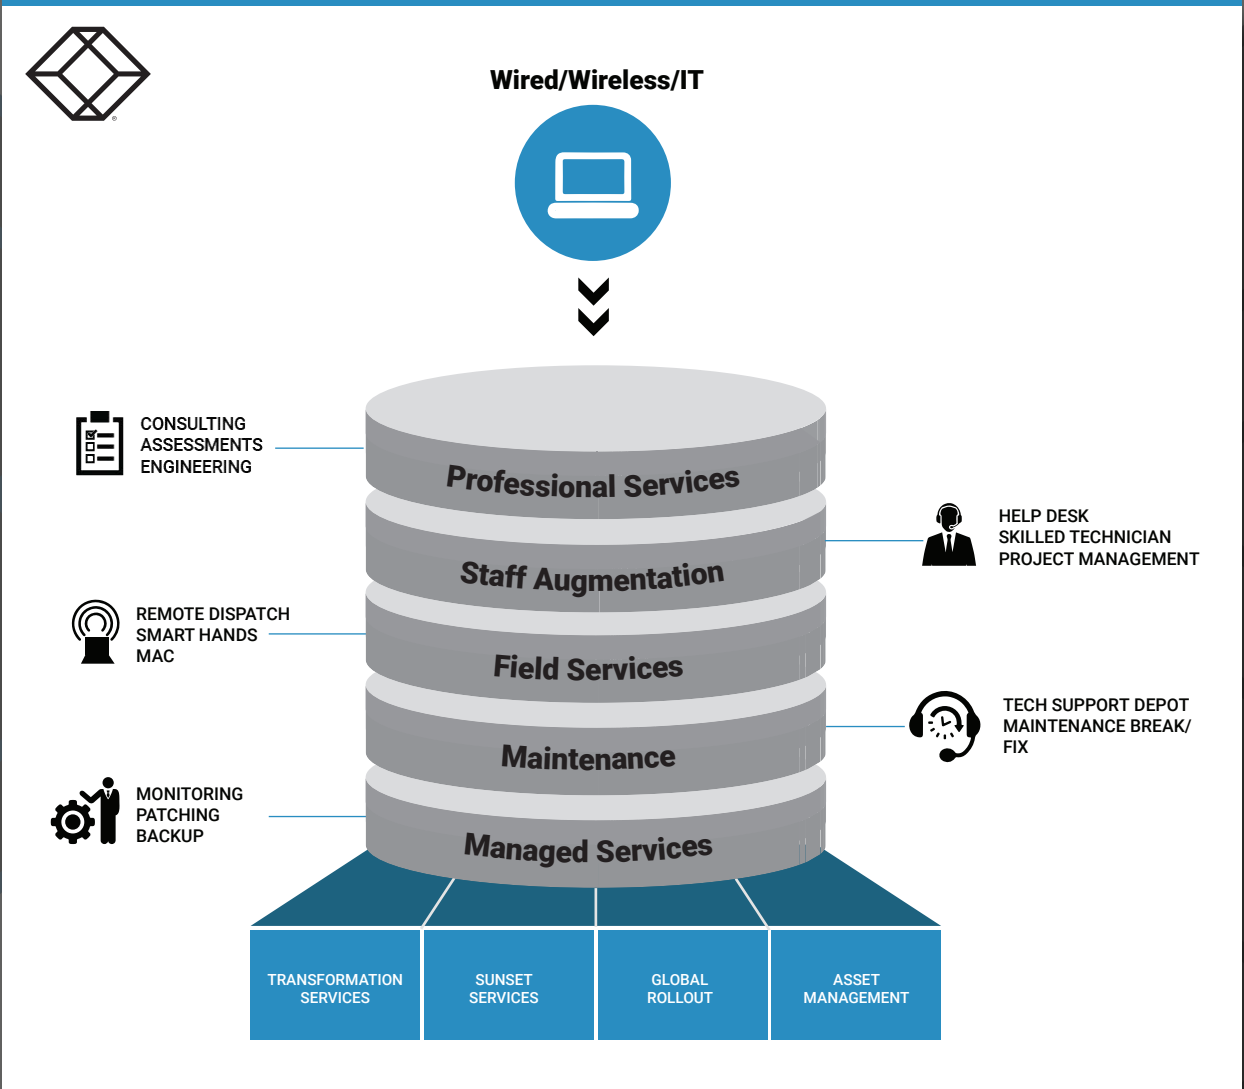

Consuming the Right Service

Black Box works closely with clients to match our portfolio of services to specific enterprise IT needs. We partner with our customers to identify, design, and execute time-saving and cost-effective strategies that are in line with their current and evolving enterprise objectives.

At Black Box, our 2,500 technicians and engineers have the highest level of technical certifications available, and are current on existing and emerging technologies. But we don't stop there. Our team is qualified to analyse and understand your consumption strategy so that your specific IT needs are met, and your usage models are supported through strategic IT solutions that are scalable and appropriate.

The Black Box team blends seamlessly into your workflow—assuming responsibilities and offering unobtrusive, yet focused and high-quality support.

Bundle Services for Bigger Solutions

Sometimes a single external IT service is not enough. Black Box offers our customers the flexibility to customise IT services, mixing and matching them to solve specific business problems. Whether your goal is to reduce risk and increase migration flexibility when installing a new wireless solution, managing thousands of new and refurbished IT assets across branches, or executing a demanding nationwide rollout of new store technology, Black Box can help bundle a service package that delivers effective and timely positive outcomes.

Where do we start?

Black Box uses a consultative approach that includes a groundwork engagement process and sets the foundational structure for IT services. This approach is based on years of experience, and includes data gathering, assessment, collaboration, and recommendations. Our team works quickly and effectively to identify needs and outline specific recommendations for successful implementation.

Customer Outcomes

Accelerated comprehensive wireless deployments through dedicated on-site RF experts

Improved customer service, expedited response time and increased tenant satisfaction through help desk and network management

Reduced costs and strategically shifted focus of resources by consolidating diverse CAPEX solutions and transitioning to an OPEX solution

Improved productivity while decreasing IT expenditures by implementing a Managed Service solution from Black Box

Provided design, staging and installation of Wired and Wireless infrastructure. Minimised Day 2 workload through on-site support

Every IT organisation has different needs. Many struggle to address daily system-wide operations, while others are challenged to keep pace with rapid changes in technology. Black Box offers an intelligent, customised portfolio of IT Service solutions that meet a variety of needs.
