

CYBALT

CyberSecurity Services

An overarching umbrella of comprehensive, innovative and full lifecycle cybersecurity services.

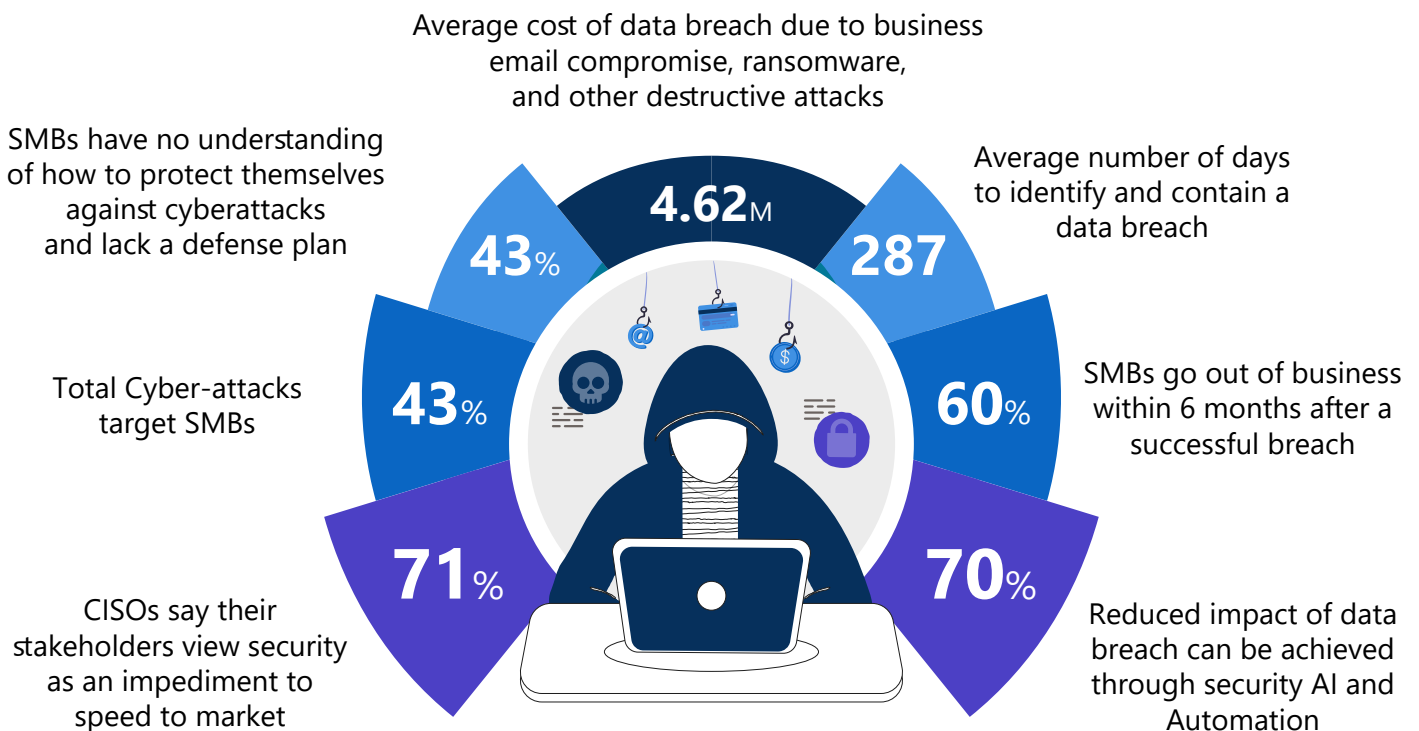

Overview

Organizations today are facing growing complexities ranging from automated and targeted attacks, continuously evolving threat actors, ransomwares, and keeping abreast with the most current security patch updates, to name a few.

Cyball, as a pure-play global cybersecurity solutions and services company, offers end-to-end security solutions to help clients in securing their growth, while they focus on achieving their business goals, through a comprehensive suite of cybersecurity consulting, integration & transformation and end-to-end managed security services.

Key Stats Depicting Need For Effective CyberSecurity Programs

Key Client Business Challenges From CyberSecurity Perspective

Cyber-attacks are constantly evolving and increasing in volume, intensity, and complexity. This is resulting in businesses across the globe running at higher security risk. This is why it becomes essential for organizations to address key challenges, such as

Moreover, it becomes essential for the security leaders to demonstrate security is not an impediment in business growth, while addressing key questions, such as

Securing Growth would entail Cybersecurity must act as an enabler for businesses and support transformations without affecting productivity

How CYBALT Helps Clients In Addressing These Challenges?

Cybalt being a pure-play cybersecurity services company understands that, “**one size doesn’t fit all**” when it comes to cybersecurity. Each organization is unique with respect to their priorities, challenges, opportunities, industry regulations, geographic nuances, among others. Hence, it is important to design security services that are best suited to the organization, keeping all those parameters in mind, instead of pushing a prefabricated product or platform.

Advisory & GRC Services

Cybalt, through our seasoned consultants & GRC experts, helps clients in achieving effective risk management & continuous compliance.

Cybalt does this through highly customizable service offerings, such as Maturity Evaluations, GRC Assessments, 3rd Party Risk Management programs, Security Testing & Simulations, Vulnerability Management as a Service, Virtual CISO & Security Training as a Service.

Infrastructure & Data Security Services

Cybalt offers a holistic approach with our Infrastructure Security Consulting and Engineering service across the domain (Firewall, IPS/IDS, SWG/SASE, Email security, WAF, Endpoint Security and Data security) to help develop a roadmap to strengthen security posture and design a secure environment.

Cybalt also extends assessment, design, implementation, maintenance, and compliance services to our client’s existing and future applications and infrastructure, in line with Zero Trust security posture guidelines.

Our Data Security services are focused on data as the primary asset, encompassing its lifecycle, aimed at offering end-to-end protection to the client’s enterprise data through Data Discovery & Classification, Data Privacy & Protection Services.

Identity & Access Management

Cybalt offers end-to-end IAM services that help clients effectively manage identity & privilege access controls across the entire organization, federation, etc. These services include maturity evaluations, consulting, implementations & managed services.

Application Security & DevSecOps

Cybalt offers an umbrella of Application Security and DevSecOps Services with emphasis on early integration of security tools, processes, and culture in to each phase of the software development lifecycle (SDLC).

Our services are highly automated and customizable to support our client’s at any stages of the SDLC by bringing together the best of technology advancements and human expertise.

Detection & Response Services

Cybalt has developed a customized next generation Managed XDR service that brings together industry leading technology, alongside human expertise to transform client operations into a single pane of glass security suite.

Leveraging Managed XDR, your entire IT environment, from networks, endpoints, cloud, email, and more, are monitored 24x7x365 by our SOC analysts to enable realtime detection, analysis, and response.

OT Security Services

Cybalt supports clients in their OT security journeys through an assessment of security & compliance status to recommendations & implementations of solutions that will address the highest priority issues and assistance with ongoing monitoring.

Cloud Security Services

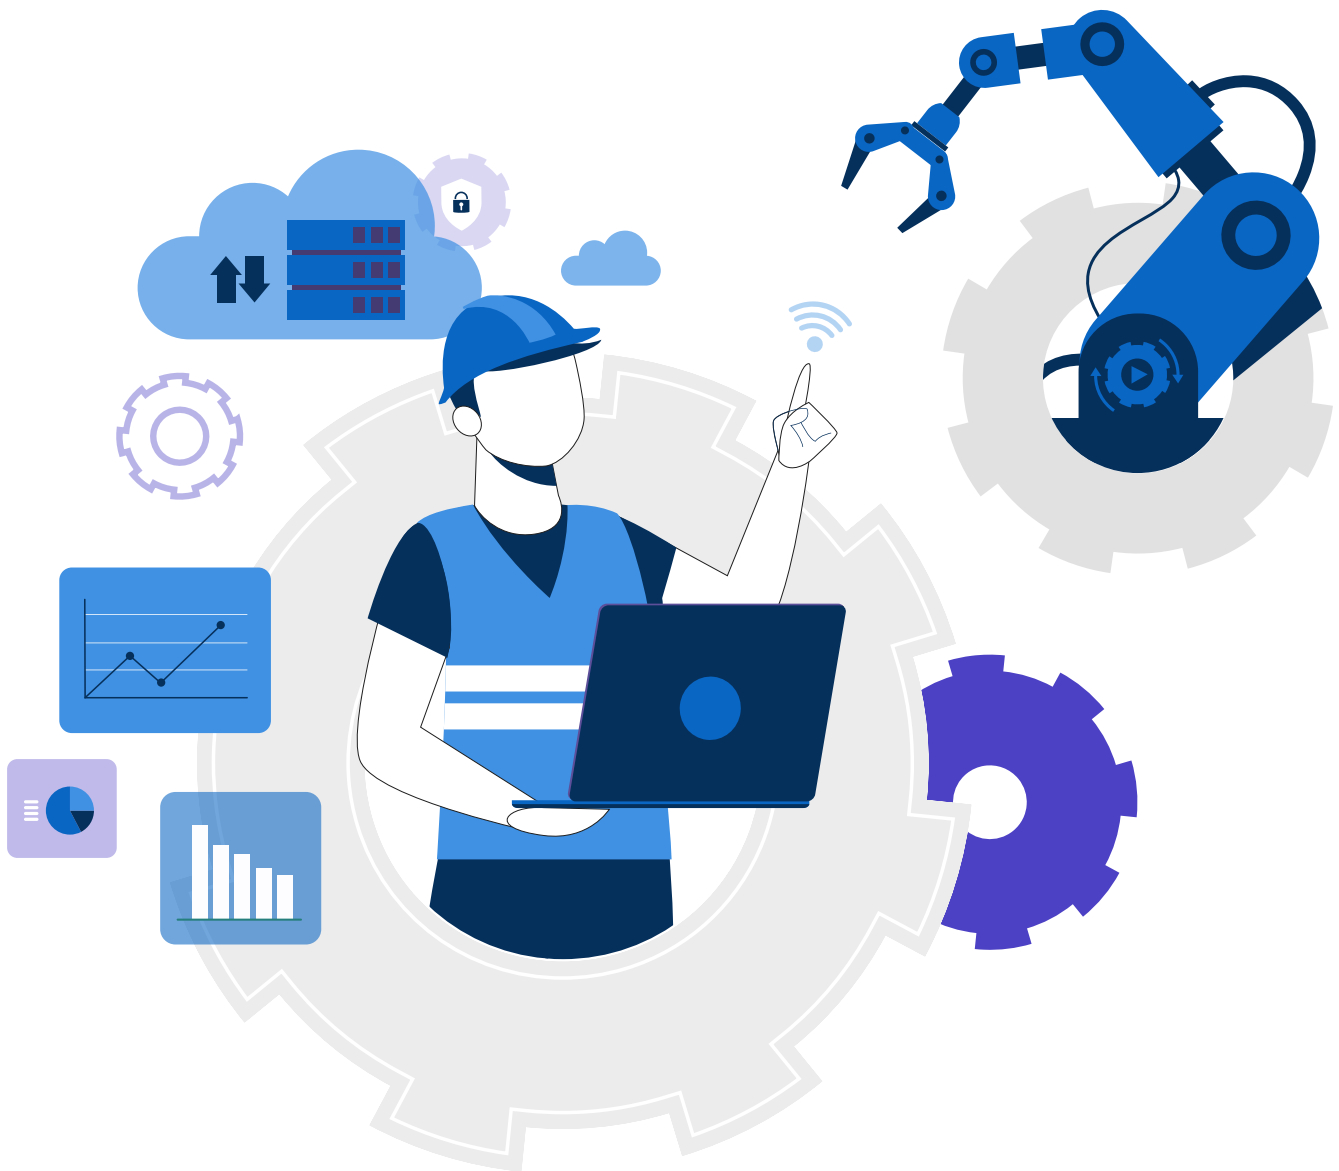

Cybalt enables clients to evaluate existing maturity, securely adopt, govern and manage the use of multiple cloud security services, such as CASB, CSPM, CWPP, DDoS Protection & WAF and implementation of Zero Trust architecture.

Enriching CyberSecurity Effectiveness Through CYBALT's Automation & Engineering Capabilities

Cyalt, through its proprietary Dragonfly Fusion platform, enables extensive automation, beyond the traditional incident detection and response. It also includes compliance, network and infrastructure, DevSecOps and other key cybersecurity functions.

For automated incident detection and response services, the Dragonfly Fusion platform serves as the ITSM and offers IP enrichment (including proprietary & OSINT TI), automated incorporation of the MITRE ATT&CK matrix, and incident management capabilities through the highly customizable playbooks, allowing us to scale the detection & response capabilities while maintaining competitive prices.

Cyalt also offers ACSC Essential Eight Maturity Reporting, Infrastructure Security Compliance, automated workflows for network and infrastructure operations, configuration management, change, policies and response activities, DevSecOps, Automation as a Service designed by highly skilled automation & engineering experts.

Why Choose CYBALT As Your Preferred CyberSecurity Partner?

With a combination of automation capabilities, matured processes, and certified security professionals, Cybalt delivers comprehensive and detail oriented security services. Our services are based on the axiom philosophy, "cybersecurity is not a technology issue; rather it is a business priority". Hence, we first try to understand business priorities of our clients and align our security solutions and services, accordingly.

Pure Play Global CyberSecurity Services

Cybalt offers comprehensive and end-to-end solutions to meet clients' cybersecurity needs.

Tailor-Made Services

Our services are highly customized to meet clients' unique business & regulatory requirements.

Expertise In Integration & Automation

Our simplified and integrated solutions are enriched with extensive automation & engineering capabilities for better return on investments.

Platform & Technology Agnostic

Our ability to work with client's existing investments, regardless of platforms & technology, makes us a preferred cybersecurity services provider.

Scalable

Cybalt ensures scalable service delivery to support clients' growth strategy.

Strategic Partnerships

Our strategic partnerships enable clients with an ability to realize technology & business innovations without price overheads.

Team Of Highly Skilled Experts

With over hundreds of years of experience in catering cybersecurity services to varying industries, Cybalt ensures you are never alone in making a cybersecurity decision or while dealing with an incident.

At CYBALT, We Secure Your Growth So You Can Focus On Your Business Growth.
