

## VideoPlex4000 Architectural Video Wall

### Experience Endless Display and Signage Possibilities

VideoPlex4000 gives users the flexibility to create uniquely shaped video walls with four or more screens and display video across multiple displays. Any signage video wall display can be freely positioned and the input can be cropped or rotated 90-270°. This signage video wall controller supports up to 4K input making it ideal for Ultra High Definition digital signage. It's the perfect solution to create visually eye-catching video walls that advertise, promote, and educate audiences while projecting messaging and content on a larger scale.

#### VideoPlex4000 Features and Benefits

##### Freely Scale and Position

Create individually-shaped signage video wall designs with display video sources freely scaled and positioned, including rotations of 90°, 180°, and 270°.

##### Input Resolutions up to 4K

Outputs video digitally 100% in real time—great for displaying live camera feeds or animated content.

##### Distortion-free Display

VideoPlex4000 enlarges video across several screens and compensates for gaps between displays so proportions are preserved.

##### Beyond Four Screens

Configure signage video walls of more than four screens by daisy chaining multiple VideoPlex4000 units.

##### Easy to Control

Setup can be done from software loaded on a PC connected via USB or via Ethernet. Ethernet enables users to configure any unit on the network from anywhere.

##### Intuitive Software

VideoPlex4000 designer software with drag & drop functionality enables users to easily configure monitors, inputs & devices.
